Live Demo: [<https://project-librax.netlify.app/>]

Executive Summary

LibraX is a web-based Library Management System designed to automate library operations and improve user access. It combines a public catalog with administrative tools for inventory control, borrowing workflows, and real-time analytics.

Core Features

Public & Member Portal: Home, About, Features, Contact, and Catalog search/filter across categories (Programming, Personal Growth, Finance, etc.).

Authentication & Profiles: Secure registration, login, profile updates, password management, and a Digital Membership Card with QR code and barcode.

Contact & Firebase Integration: Submissions from the Contact page ("Send Message") are stored in real-time in Firebase Database.

Book Inventory: Complete CRUD (Add, Edit, Delete, View)

Profile Management: Self-service profile updates and secure password changes.
